SINGLE ENDED TUBE SPANNER

MESW12

DESCRIPTION

Melco Whitworth/Metric Single-Ended Tube Spanners, also known as box spanners, feature one hexagonal profile and one circular profile at each end of the tube. Crafted from heavy gauge steel pressed using air compression, these tools boast durability and reliability. Manufactured in England, Melco ensures quality-assured products. The spanners excel in removing fittings located in challenging, hard-to-reach areas. Operated by a T-bar fitting through holes drilled at right angles to the tube, allowing efficient twisting. The long shape of these spanners proves particularly advantageous in navigating tight recesses, making them indispensable for tasks in vehicle machinery and plumbing. These SW Series are measured in Metric/Whitworth measurements.

FEATURES

- Great for removing/fitting elements in hot water cylinders.
- Hexagonal profiles at one end - Circular at the other.
- Made from heavy gauge steel, pressed using air compression.
- Ideal for removing fittings in hard-to-reach areas.
- Operated with a T-bar.
- Particularly useful in vehicle machinery and plumbing tasks.
- Powder-coated Black.
- Made in England.
