METRIC DOUBLE ENDED TUBE SPANNERS

DESCRIPTION

Melco Double-Ended Tube Spanners, also known as box spanners, feature two hexagonal profiles at each end of the tube. Crafted from heavy gauge steel pressed using air compression, these tools boast durability and reliability. Manufactured in England, Melco ensures quality-assured products. The spanners excel in removing fittings located in challenging, hard-to-reach areas. Operated by a T-bar fitting through holes drilled at right angles to the tube, allowing efficient twisting. The long shape of these spanners proves particularly advantageous in navigating tight recesses, making them indispensable for tasks in vehicle machinery and plumbing. These TM Series are measured across the hexagon flats in metric measurements.

SKU	BARCODE	SIDE 1	SIDE 2	LENGTH	T-BAR	MATERIAL	WEIGHT
METM5	9419678016076	8mm (0.319")	9mm (0.358")	100mm (4")	4.8mm	Steel	37g
