

PRODUCT INFO

POWER-T™ BALL HEX T-KEY EK648

Eklind Power-T™ Ball Hex T-Keys are high-quality, industrial-grade tools designed for professional use. Made in the USA from Eklind® Alloy Steel and heat treated for optimal strength and ductility, these tools are built to last. The Eklind® Black Finish provides resistance to rust, ensuring durability even in harsh environments. These ball-hex keys allow fasteners to be driven at angles of up to 30 degrees, offering greater flexibility in tight spaces. The T-handle design provides extra reach and leverage, while the soft, textured overmold offers added comfort, slip resistance, and safety. The permanently molded identification and color-coded blue handles indicate metric sizes for easy identification.
