

PRODUCT INFO

STRIPPING KNIVES

DESCRIPTION

Footprint Stripping Knives are a versatile tool that can be used in various domestic and industrial applications, with their primary use being the removal of wallpaper. These knives are made from special spring-tempered carbon steel to keep the blade rigid and ensure superior strength. The hardened and tempered one-piece blade is machine-ground to provide a sharp edge for removing paint and wallpaper. The blade is also polished to prevent premature rust, ensuring its longevity. The handle of the stripping knife is designed for comfort and durability, with hardwood scales riveted to the handle to create a non-slip grip. With all of these features, the Footprint Stripping Knife is a reliable and efficient tool that can be used for many tasks beyond wallpaper removal. Made in Sheffield, Britain.

- Predominantly used for removing wallpaper.
- Made from spring-tempered carbon steel.
- One-piece blade for added strength.
- Polished to prevent premature rust.
- Hardened and tempered blade for superior strength.
- Hardwood scales riveted in handle for a comfortable, non-slip grip.
