

PRODUCT INFO

AUTO COPPER PIPE CUTTERS

DESCRIPTION

The Monument Automatic Copper Pipe Cutter is designed for precise cutting of copper pipes. It features a robust ABS plastic body housing a durable steel cutting mechanism. The open-gate design allows easy insertion of the pipe; once closed, the cutter rotates to produce a clean edge. It cuts in both directions and is compact, making it suitable for confined spaces. Each model is size-specific and will only cut the stated pipe diameter. Supplied with a preloaded, replaceable, heat-treated steel cutting wheel (spares available separately). Not suitable for stainless steel tubes. Made in Britain.

FEATURES

- Designed for precise cutting of copper pipes only.
- Durable ABS plastic body, housing its steel mechanism.
- Compact design for confined spaces.
- Openable gate design - clips onto pipe.
- Can rotate in both directions, producing clean cuts.
- Preloaded with a replaceable, heat-treated steel cutting wheel.
