

PRODUCT INFO

INT/EXT DEBURRER

MM365

DESCRIPTION

The Monument Internal/External Deburrer is designed for copper and plastic pipes ranging from Ø 3-35mm. Its durable plastic body houses three precision blades that taper to a point for internal deburring. The opposite ends of the blades form three tapered edges suitable for external deburring. After cutting copper pipe, internal or external burs are often left behind depending on the cutter used. This tool removes those burs, restoring the pipe to the correct diameter internally and externally. Compact and simple to use, it ensures clean, accurately sized pipe ends every time. Made in Britain.

FEATURES

- For copper and plastic pipes Ø 3-35mm.
- Plastic body with three precision blades.
- Blades taper to a point for internal deburring.
- Opposite ends form tapered edges for external deburring.
- Simple and compact design.
