

PRODUCT INFO

CROX TOOL

DESCRIPTION

The Stanway Trade Crox Tool is designed to form a secure crox ring on copper pipes, holding a nut firmly in place and ensuring a reliable connection with other fittings. Twisting the handle expands the ball bearings, creating a lip inside the pipe to prevent the nut from slipping off. The tool features a round tapered end to keep the tube evenly round before use and is user-friendly in operation. Crafted from high-quality, durable materials for long tool life. Made in Britain.

FEATURES

- Forms a secure crox ring on copper pipes.
- Holds the nut firmly in place, preventing it from slipping off.
- Ball bearings expand inside the pipe to create a lip.
- Round tapered end keeps the tube evenly round before use.
- Crafted from high-quality, sturdy materials for long tool life.
