

## PRODUCT INFO

# SWAGING PUNCH TOOL

### DESCRIPTION

The Stanway Trade Swaging Tool is a punch tool designed for expanding copper tubing before brazing. It allows you to join like-size copper tubes without using additional couplings. To use, insert the tool into the end of the copper tube and strike the base with a hammer until the tube forms around the expansion section. This creates a snug fit for a strong, permanent brazed joint. Made from sturdy, high-quality materials, the tool is built for durability and long service life, making copper tube expansion simple and reliable. Made in Britain.

### FEATURES

- Designed for expanding copper tubes before brazing a joint.
- Allows joining of like-size copper tubes without additional couplings.
- Simple to use: Strike with a hammer until tube forms around the expansion section of the tool.
- Ensures a snug fit for a strong, permanent brazed joint.
- Crafted from high-quality, sturdy materials for long tool life.
