

PRODUCT INFO

PLASTIC FLOAT

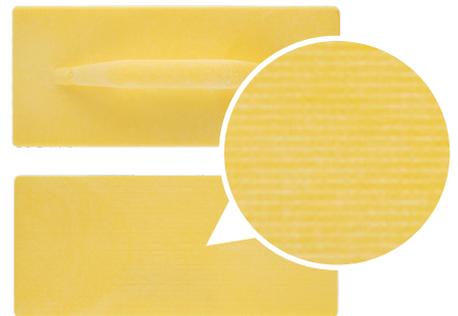

DESCRIPTION

The Stanway Plastic Floats are the perfect tools for your next finishing job! Made from a high quality polyurethane foam plastic makes this float lightweight, hard wearing, and that it will not warp under load. The one piece moulded design adds strength and durability - these don't wear as quick as cheap replicas. This float is used for general purpose, such as applying and texturing plasters, concrete, and renders. This float has a slight textured face, best used for floating plaster. Plaster or render will not be sucked off the wall by the surfaces of this plastic float because they are non-absorbent.

FEATURES

- Lightweight, hard-wearing polyurethane foam.
- One-piece moulded design – durable, won't warp.
- Slightly textured face – ideal for plaster.
- Non-absorbent – won't pull plaster or render off.
- Suitable for general-purpose use: plaster, concrete, and renders.
