CIRCULAR SAW BLADES

SPEEDLINE SERIES

DESCRIPTION

GFB Speedline Circular Saw Blades feature high-density carbide teeth, delivering up to 3x longer cutting life through hardwood, softwood, plywood, and treated timber. The Cross Cut ATB anti-kickback geometry ensures fast, controlled cuts with a smooth, chip-free finish every time, while laser-cut silencing lines minimise vibration and noise for cleaner, straighter results. An ultra-thin kerf combined with a reinforced plate maximises cutting speed and efficiency while maintaining strength, and the reinforced steel construction keeps the blade true and stable at speeds up to 8,000 RPM. Designed for professional results, they deliver reliable power, durability, and finish cut after cut. Universally compatible, they are engineered to fit almost all major machines on the market, including Makita, Milwaukee, Bosch, DeWalt, Festool, Skil, and more.

CODE	BARCODE	DIAMETER	TPI	BORE	KERF	BUSHINGS	MAX SPEED	WEIGHT
GFB567	9313234005675	165mm	24	20mm	1.6mm	16mm	8000 RPM	147g
