

## PRODUCT INFO

# CIRCULAR SAW BLADES

## DEMOLITION SERIES

### DESCRIPTION

GFB Demolition Circular Saw Blades feature high-density carbide teeth, delivering up to 6x longer cutting life through all types of wood & timber, including timber with embedded nails or bolts. The alternate top bevel (ATB) with innovative point-tip tooth design delivers extreme cutting efficiency and ultimate tracking control. Laser-cut silencing lines minimise vibration and noise for cleaner, straighter results. An ultra-thin kerf combined with a reinforced plate maximises cutting speed and efficiency while maintaining strength and boosting cordless runtime by over 30%. A black Teflon coating fights heat, pitch build-up, and corrosion for lasting performance, while reinforced steel construction keeps the blade true and stable at speeds up to 10,000 RPM. Built for professional results, it delivers power, durability, and finish you can trust cut after cut. Universal compatibility ensures it fits almost all major machines on the market, including Makita, Milwaukee, Bosch, DeWalt, Festool, Skil, and more.

- High-density carbide teeth - 6x longer lasting.
- Cuts timber & nail embedded wood.
- ATB tooth design with point-tip for fast cutting.
- Laser-cut silencing lines.
- Ultra-thin kerf + reinforced plate.
- Black Teflon coating.
- Reinforced steel construction.
- Bushings included.
