DESCRIPTION

Jorgensen's Oscillating Blade Assortment Pack delivers versatility and performance across a wide range of cutting tasks. This 3-pack includes BIM Fine Tooth, HCS Japanese Tooth, and BIM Titanium-Coated Fine Tooth blades, giving users the right option for different materials and applications. The bi-metal (BIM) blades are ideal for cutting wood, nail-embedded wood, drywall, PVC, copper, and steel, while the high-carbon steel (HCS) blade is suited to hardwood, softwood, drywall, and PVC. Titanium-nitride coated teeth reduce heat build-up and increase hardness for extended blade life. Each blade features a universal-fit open-back connector for compatibility with most major oscillating tools, plus a D-Brand adapter.
