

## PRODUCT INFO

# SCUTCH COMBS AND DROVES

### DESCRIPTION

The Footprint Scutch Combs and Chisel Bits (Droves) are designed for use with scutch chisels, scutch hammers and SDS scutch chisels when preparing stone and masonry surfaces. Ideal for cutting, shaping and dressing stone and brickwork, these double-sided bits provide reliable performance for masonry applications. Manufactured from hardened and tempered steel for extra strength and durability, they are built for repeated use. The zinc-coated finish helps protect against rust and wear. The **smooth/flat edge** of a drove is used for flattening and shaping masonry surfaces, creating a smoother finish without leaving tooth marks. The **toothed edge** of a scutch comb is used to create a textured finish on stone and brick surfaces, leaving a lined or grooved effect.

### FEATURES

- Designed for use with scutch hammers and holders.
- Ideal for cutting, shaping and dressing stone and brickwork.
- Hardened and tempered steel for extra strength and durability.
- Zinc coated to prevent rust, wear and tear.
- Double-sided design for extended working life.

### USE WITH

**FP138**
