

PRODUCT INFO

SCUTCH COMBS AND DROVES

DESCRIPTION

The Faithfull Scutch Combs and Chisel Bits (Droves) are designed for use with scutch hammers and holders when preparing stone and masonry surfaces. Ideal for cutting, shaping and dressing stone and brickwork, these double-sided chisel bits provide reliable performance for masonry applications. Manufactured from high-quality chrome vanadium steel for strength and durability, they are built to withstand repeated use. The **smooth/flat edge** of a drove is used for flattening and shaping masonry surfaces, creating a smoother finish without leaving tooth marks. And the **toothed edge** of a scutch comb is used to create a textured finish on stone and brick surfaces, leaving a lined or grooved effect.

FEATURES

- Designed for use with scutch hammers and holders.
- Ideal for cutting, shaping and dressing stone and brickwork.
- Made from high-quality chrome vanadium steel for durability.
- Double-sided design for extended working life.
